

BEMS Equity Token

Version 1.0

Introduction

What is a stock?

A stock represents ownership in a company or project, divided into small units and distributed among investors or shareholders. Stocks are primarily of two major types: Common and Preferred stocks.

Common Stock:

- **Ownership:** Common shareholders are considered part owners of the company, so they take part in the profits and losses of the company.
- **Voting Rights:** Holders of common stock typically do not have voting rights at general meetings of the company and cannot participate in company decisions such as electing board members.
- **Dividends:** Dividends on common stock are usually paid annually or quarterly to shareholders, and the amount varies depending on the company's performance.

Preferred Stock:

- **Priority in Dividend Payments:** Preferred shareholders have priority over common shareholders in receiving dividends. These dividends are usually fixed and predetermined in amount and paid in addition to regular dividends.
- **Voting Rights:** Preferred shareholders have voting rights and can participate in company decisions, such as electing board members.
- **Priority in Repayment:** In the event of the company's dissolution, Preferred shareholders have the right to receive their capital back before common shareholders.

Advantages of Investing in Stocks:

- **Profitability:** Investing in stocks can yield high returns, principally if the company performs well.
- **Voting Rights:** It allows shareholders to participate in important company decisions.
- **Liquidity:** Stocks are easily bought and sold on stock exchanges.

Overall, stocks are one of the significant investment tools that can be a suitable choice depending on the investor's risk tolerance and financial goals.

Initial Public Offering (IPO)

Often, companies with a strong track record in the cryptocurrency field turn to an initial public offering (IPO) to raise the necessary funds for growth and development. Essentially, an IPO provides opportunities for those interested in investing in profitable cryptocurrency companies to purchase shares in their chosen company. So, besides playing a small role in increasing the company's financial resources, the shareholders stand to gain significant profits from this investment. Simply put, an IPO is a win-win situation that meets financial company resources while delivering substantial returns to new investors.

An initial public offering (IPO) allows a business or company to go public, transforming the company from a private entity into a public one by offering shares to the public. It is a significant step for companies that have matured and established their position in the community and market. An IPO can provide the company with substantial funds used by the company managers for further growth and development.

Nowadays, Initial Public Offerings (IPOs) have gained a lot of popularity worldwide. In an IPO, company employees also have the opportunity to purchase shares. If you were an employee who also owned shares in the company, wouldn't you be more motivated to work towards its growth and development? Overall, an IPO leads to increased credibility for companies. It is worth noting that, besides an IPO, companies can raise additional capital by making secondary offerings.

Smart Contract

A smart contract is a program or code stored on a blockchain that executes automatically when specific conditions are met without intermediaries or requiring anyone's approval. Smart contracts are designed so that, when executed, all parties can be assured of their correct implementation, eliminating the need for intermediaries.

The main appeal of smart contracts lies in their irrevocability once executed; even the developer cannot prevent their execution unless provisions for such a scenario are prepared beforehand. It ensures that all parties are confident in its proper execution.

BEM Foundation

The BEM Foundation was established in 2020 as an entrepreneur in the blockchain field to develop this industry globally.

The foundation consists of experts in cryptocurrency, blockchain programming, and marketing. Each member of the foundation has several years of experience in their field. Inspired by blockchain principles (decentralization) and to increase the security level of projects, these individuals' identities remain disclosed.

The mission of this foundation is to create a blockchain-based ecosystem and job opportunities in the blockchain field.

For more information about the BEM Foundation and its operations, you can visit the official website, <https://bemfoundation.com>.

Sales System:

The BEM Foundation has tokenized its shares to facilitate global development and attract \$1 billion in investment. The offering of shares of the BEM Foundation is via a dedicated platform designed with smart contracts. These shares, known as BEMS STOCK, are exclusive equity tokens abbreviated as BEMS.

- The main advantage of the BEM Foundation shares is their always upward-trending chart. It is due to the innovative sales and development system.

An always upward-trending chart means that all investors will sell their shares at a profit, and the only difference among shareholders is the duration of share ownership, which increases the rate of return.

Investors and enthusiasts can visit the official website, <https://bems.market>, the BEM Foundation's share platform, and purchase BEMS shares with TRX tokens. The minimum purchase amount is 100 BEMS units.

Initial Price:

The price of each unit of BEM Foundation shares during the initial offering will be set at a base price of 1 TRX. This price is exclusive of purchase fees and transaction costs.

Buying and Selling Capability:

Buying and selling BEM Foundation shares is unconditional and can be done instantly through the BEM Foundation's share platform. The platform allows for real-time buying, selling, and liquidity of shares.

Issuance of Shares:

BEM Foundation shares are primarily of two major types: Common and Preferred shares, offered as anonymous shares.

The difference between the Common and the Preferred shares lies in the number of shares allocated to shareholders. Any shareholder who owns more than 500,000 units of BEMS shares is considered a Preferred shareholder.

Benefits of Preferred Shareholders:

- **Voting Rights:** Preferred shareholders have voting rights in decisions of the BEM Foundation, such as the election of board members, presentation of new projects, project updates, decision-making on events, etc. They have the right to voice their opinions.
- **Annual Company Meetings:** Each January, Preferred shareholders receive an invitation card from the foundation, including round-trip tickets and accommodation, to attend the yearly shareholder ceremonial seminar hosted by the foundation.
- **Access and Communication:** Overall, the Preferred shareholders are informed and involved by the CEO before any events or developments. They can directly communicate their opinions and suggestions to the foundation's management.
- **Project Participation:** When the foundation requires participation in project development, priority is given to the Preferred shareholders for involvement.
- **Ownership Documentation:** Preferred shareholders have the option, after purchasing shares, to visit the official office of the BEM Foundation in Turkey. By submitting their share tokens, they can have their shares documented and officially registered under their name.

Articles of Incorporation of BEM Foundation Shares

Article 1: Introduction

These articles of incorporation are published to regulate the rules and regulations related to the issuance and management of shares of the BEM Foundation.

Quick Overview:

- Name: BEM STOCK
- Symbol: BEMS
- Type: Equity Token
- Owner: BEM Foundation
- Total Supply: 3,000,000,000
- Circulating Supply: 3,000,000,000
- Creation Time: 2023-12-12 04:41:00 (UTC)
- Smart Contract Address: TNsFoqzBCHqMKumN8xMFaj48nVAT91kH6s
- Sales Platform: <https://bems.market>

Article 2: Objectives

The objective of the BEM Foundation in issuing shares is to raise \$1 billion in financial resources. These funds will be utilized for the development and expansion of blockchain projects currently underway by the foundation. These projects may include the creation and enhancement of new blockchain platforms, the improvement of existing infrastructures, and the provision of innovative services in the digital currency and smart contract domains.

Additionally, some financial resources will be allocated to creating job opportunities within the blockchain sector. By investing in the education and training of a specialized workforce in blockchain technology, the BEM Foundation aims to increase the number of skilled and knowledgeable professionals in this industry. These initiatives, besides contributing to the growth and advancement of foundation projects, also foster the overall development of the blockchain industry and increase employment opportunities within this field.

Article 3: Distribution of Shares

- Total Number of Shares: 3,000,000,000 BEMS

The BEM Foundation has limited its total number of shares to 3 billion units (3,000,000,000 BEMS). In other words, the maximum number of shares that can be issued by the BEM Foundation is 3 billion units, and this will remain fixed.

Goal:

1. **Stability and Trust:** By setting a fixed number of shares, the BEM Foundation assures investors that no additional shares will be issued. That minimizes concerns about the devaluation of shares due to the issuance of new shares.
2. **Inflation Control:** Limiting the number of shares helps prevent excessive inflation of shares and preserves their value.
3. **Better Planning:** With a specific and fixed number of shares, the foundation can engage in more precise financial planning and project development.
4. **Transparency:** Declaring a fixed number of shares enhances transparency, giving investors greater confidence in investing in the foundation.

Therefore, this provision demonstrates BEM Foundation's commitment to maintaining the value of shares and creating a stable and predictable investment environment.

Article 4: Share Allocation

- **Special and Public Sale (60%):** 1,800,000,000 BEMS

Shares allocated for common and Preferred shareholders constitute 60% of the total shares.

- **BSM Bonds (10%):** 300,000,000 BEMS

Shares allocated for liquidity of BSM bonds amount to 10% of the total shares.

- **Company (20%):** 600,000,000 BEMS

Shares allocated for company operational needs, management, and employees, 20% of the total shares.

- **Golden Goose Fund (10%):** 300,000,000 BEMS

Shares allocated exclusively to the Golden Goose Fund for managing the BEMS share market constitute 10% of the total shares.

Article 5: Sales Details

Public Sale

The public sale period of BEMS is set for one year, which will be in three parts of 4 months.

- Initial offering price: 1 TRX
- Minimum purchase of shares: 100 units of BEMS

Part One:

- Duration: 4 months
- Amount for Sale: 300,000,000 BEMS
- Calculation Method: BEMS Amount x BEMS Price + 3% Fee
- 3% fee will be charged on each purchase.
- During the first month of part one (Special Sale Period), shareholders can purchase BEM Foundation shares at a 5% discount.

Part Two:

- Duration: 4 months
- Amount for Sale: 600,000,000 BEMS
- Calculation Method: BEMS Amount x BEMS Price + 6% Fee
- 6% fee will be charged on each purchase.

Part Three:

- Duration: 4 months
- Amount for Sale: 900,000,000 BEMS
- Calculation Method: BEMS Amount x BEMS Price + 9% Fee
- 9% fee will be charged on each purchase.

Clause: The sale fee will return to 2% after the total sale is completed.

Special Sale

During the first month of part one, shareholders can purchase BEM Foundation shares at a 5% discount. This discount is offered to encourage initial investment and support for the foundation's projects in their early stages.

- Duration: 1 month
- Discount Rate: 5%
- 3% fee will be charged on each purchase.

Calculation Details:

1. **BEMS Amount:** The number of shares the investor intends to purchase.
2. **BEMS Price:** The price per unit of BEMS at the moment of purchase.
3. **3% Fee:** A fee added to the total purchase amount.
4. **5% Discount:** A discount subtracted from the total purchase amount.

The final formula for calculating the price during the Special Sale period is:

$$\text{Final Price} = (\text{BEMS Amount} \times \text{Price} + 3\% \text{ Fee}) - 5\% \text{ Discount}$$

Example:

Let's say an investor wants to purchase 100.000 units of BEMS, and the price per unit is 1 TRX:

1. **BEMS Amount:** 100.000 units
2. **BEMS Price:** 1 TRX
3. **3% Fee:** 0.03 TRX per unit

Calculation of total amount without discount:

$$100.000 \text{ BEMS} \times 1 \text{ TRX} + 3\% \text{ Fee} \Rightarrow 100.000 \text{ TRX} + 3.000 \text{ TRX} = 103.000 \text{ TRX}$$

4. After applying the **5% discount:**

$$103.000 \text{ TRX} - 5\% \text{ Discount} \Rightarrow 103.000 \text{ TRX} - 5.150 \text{ TRX} = 97.850 \text{ TRX}$$

Therefore, during the Special Sale period, an investor can purchase 100.000 units of BEMS for 97.850 TRX.

Meeting of the board of shareholders

At the end of the first year of the BEMS MARKET project, the board of shareholders will hold a meeting to review the state of the BEMS market. If all the BEMS shares are sold before the end of the first year, the situation is clear; the stock market will continue with 10% of the Golden Goose fund balance without burning shares.

If 60% of BEMS shares are not sold by the end of the first year, the board of shareholders will decide how to continue the sale process. These decisions include burning the remaining shares, extending the sale opportunity, or selling the shares all at once to partner companies. The decision of the board of shareholders will be based on the one-year performance of the BEMS MARKET project.

Article 6: Buy Details

Shareholders may sell BEMS tokens to the BEMS Market trading platform.

Description:

In each purchase of BEMS shares through the BEMS Market, in addition to a 3% purchase fee, 10% of the total amount will be deducted as a contribution to the Golden Goose Fund. The details of the Golden Goose Fund are in the following sections.

Clause: The purchase fee will return to 2% after the total sale is completed.

Calculation Details:

1. **BEMS Amount:** The number of shares the BEMS trading platform intends to purchase.
2. **BEMS Price:** The price per unit of BEMS shares at the purchase time.
3. **3% Fee:** This is calculated based on the total purchase amount.
4. **10% Golden Goose Share (GS):** A portion of the total purchase amount is allocated to the Golden Goose Fund.

The final formula for calculating the purchase price is:

$$\text{Total Price} = (\text{BEMS Amount} \times \text{BEMS Price} - 3\% \text{ Fee}) - 10\% \text{ GS}$$

Example:

Let's assume the BEMS Market platform wants to purchase 100.000 units of BEMS, and the price per unit is 1 TRX:

1. **BEMS Amount:** 100.000 BEMS
2. **BEMS Price:** 1 TRX
3. **Fee:** 3%
4. **GS:** 10%

Calculation details:

1. Calculating the total amount without deducting GS and the fee:
 $100.000 \text{ BEMS} \times 1 \text{ TRX} = 100.000 \text{ TRX}$
2. Deducting the 3% fee:
 $100.000 \text{ TRX} - 3\% \text{ fee} = 97.000 \text{ TRX}$
3. Deducting the 10% GS contribution:
 $97.000 \text{ TRX} - 10\% \text{ GS} = 87.300 \text{ TRX}$

Therefore, in this example, the BEMS Market platform purchases 100.000 units of BEMS shares for a final price of 87.300 TRX.

Clause: The sold shares will burn immediately, meaning they are removed from circulation. This reduces the total number of shares over time. This action can help increase the value of the remaining shares as the supply of shares decreases.

Article 7: Burn Mechanism

Shares are burned with each purchase by the BEMS Market platform:

- 90% of the total supply of BEMS shares will be gradually burned over time. This mechanism helps reduce the circulating supply and increase the value of the remaining shares.

Further details:

1. Share burning with each purchase: With every purchase made through the BEMS Market platform, the purchased shares are immediately burned. This means these shares are removed from circulation, reducing the total number of shares available in the market.
2. Gradual burning of 90% of the total supply: It is planned that 90% of the total supply of BEMS shares will be gradually burned over time. This process will be done gradually and systematically to help reduce the supply of shares in the market.
3. Increasing the value of remaining shares: By reducing the total number of shares in circulation, the supply becomes more limited. This limitation in supply, if demand remains stable or increases, can lead to an increase in the value of the remaining shares in the market. Thus, current shareholders will benefit from the potential increase in share prices.

This burn mechanism is one of the BEM Foundation's strategies to manage the supply and demand of shares and to maintain and increase their value.

Article 8: Company Share Sale Process

With each sale of BEMS shares made through the dedicated BEMS Market platform, 30% of the sale amount will be used by the platform to purchase the company's allocated shares. This process ensures liquidity and prevents market disruption and the depletion of the liquidity fund.

Further details:

1. Sale of BEMS shares: Whenever the BEMS Market platform executes a sale for a user, the platform will automatically use 30% of the sale amount to purchase the company's shares under the same general conditions.
2. 30% purchase by the platform: From the total sale amount of the shares, 30% of the company's allocated shares will be purchased by the platform. This means the platform will automatically repurchase 30% of the sold shares.
3. Maintaining liquidity and market stability: This mechanism is designed to prevent the liquidity fund from being depleted and to ensure a structured liquidity process for the company's shares. By repurchasing shares, the platform helps avoid significant price spikes and maintains greater price stability.
4. Market support: This process ensures that demand for shares in the market is sustained, preventing severe price fluctuations and promoting a more balanced market operation.

This mechanism assists the BEM Foundation in maintaining necessary liquidity during share sales, preventing market disruptions, and supporting the stability and value of BEMS shares over time. Additionally, it provides sufficient resources for managing and developing other projects.

Article 9: Liquidity of BSM Bonds

1. Depositing:

- Investors are required to deposit BEMS shares and BSM bonds in a 10:1 ratio. For instance, to deposit 100 units of BEMS shares, 10 units of BSM bonds must also be deposited.

2. Deposit Period:

- The combined deposit period for shares and bonds is 6 months. During this period, investors cannot access their deposits.

3. Deposit Interest:

- After the deposit period ends, investors will receive BEMS shares equivalent to the bonds they deposited. This means that each unit of BSM bond will be converted into BEMS shares at 10 times its original value (1000% interest).
- For example, if an investor deposits 10 units of BSM bonds along with 100 units of BEMS shares, after 6 months, they will receive 110 units of BEMS shares.

This mechanism not only encourages investors to make larger and longer-term deposits but also offers significant returns, thereby helping to stabilize and strengthen the market for BEM Foundation's shares and bonds.

Article 10: Golden Goose Fund

The Golden Goose Fund is the main liquidity pool for the BEMS Market project.

Share Allocation:

- 10% of the total shares (BEMS) are allocated to the Golden Goose Fund.
- Shares allocated to the Golden Goose Fund are referred to as GS.
- The 10% of shares belonging to the Golden Goose Fund will never be burned and will remain in the liquidity pool.

Funding sources for the Golden Goose Fund:

- Proceeds from sales.
- Transaction fees from buying and selling.
- 10% Golden Goose (GS) share from each purchase.
- 2.5% of every deposit goes to the MMP project.

Clause: The dividend payments from MMP to the Golden Goose Fund will stop once all BEMS shares have been sold.

Budget Allocation:

- **Energy Supply:**

10% of the GS Fund's budget is allocated for the creation of the necessary energy for the smart contracts in the BEMS Market project.

- **Liquidity Provision in the BEMS/TRX Pool:**

45% of the GS Fund's cash budget, along with the GS Fund's share, is deposited into the BEMS/TRX liquidity pool.

- **Sales Development:**

11% of the GS Fund's budget is allocated for developing the sale of shares.

- **Marketing:**

4% of the GS Fund's budget is allocated for marketing the BEMS project.

- **Operational Activities:**

20% of the GS Fund's budget is dedicated to the project managers for operational activities of the company.

- **Gold Purchase:**

10% of the GS Fund's budget is allocated for purchasing 24-carat gold bars to provide backing for the BEM Foundation.

Liquidity Distribution:

Liquidity from the GS Fund is distributed weekly to the budget allocation areas. This regular process ensures the proper and efficient distribution of the fund's financial resources to various parts of the project.

Article 11: License

**The Best Economic Money
Foundation**

Activity License for BEMS Market Project:

**BEM Foundation
Official License**

The BEM Foundation, formally known as «The Best Economic Money Foundation,» with license number 02644548, hereby informs the public that the website under the exclusive domain <https://bems.market> is under our direct supervision and oversight.

This website, as an official platform, operates under our license to meticulously and securely offer equity tokens named BEMS. This initiative aligns fully with the goals and strategies of the BEM Foundation in blockchain activities and financial services.

This license is granted to ensure commitment and transactional quality, providing secure and safe interactions on this platform.

Therefore, any purchase or sale of BEMS tokens from this website is strictly conducted within the framework of our license and oversight.

Sincerely,
CEO, BEM Foundation

Yerevan, Armenia
bemfoundation.com

Article 12: Summary

These articles of incorporation are prepared by the Best Economic Money Foundation (BEM Foundation) to secure the necessary financial resources for the development and expansion of blockchain projects and create job opportunities in this field. All aspects related to the distribution and management of BEM shares are comprehensively and transparently outlined in these articles of incorporation to ensure trust and confidence among investors and stakeholders.

The primary objectives of these articles of incorporation include:

1. Financial Resource Acquisition:

Attracting necessary capital for the development and implementation of diverse and innovative blockchain projects.

2. Employment Creation:

Providing job opportunities in the blockchain sector and increasing the skilled workforce in this field.

3. Development and Expansion of Blockchain Projects:

Advancing existing projects and creating new initiatives in blockchain technology to enhance its capabilities and applications.

This framework not only aims to support the growth of blockchain technologies but also to foster transparency and accountability within the Best Economic Money Foundation (BEM) ecosystem.

These articles of incorporation comprise 12 clauses and are prepared and established for the BEMS Market equity distribution project under the Best Economic Money Foundation (BEM Foundation), with the domain address <https://bems.market>. The purpose of these articles of incorporation is to create a legal and operational framework for the management, development, and utilization of BEMS shares and related projects. This document serves as a guide for all shareholders and investors to participate in BEM Foundation projects with trust and confidence, thereby contributing to the growth and development of the blockchain industry.
